

# HP10

Stereo Headphones

## HP10 Stereo Headphones

The HP10s feature a comfortable, adjustable closed-back headband design, which supports a pair of 40mm full-range drivers. These drivers effectively lock sound into the headphones, allowing users to listen at lower volumes without being bothered by outside noise, as well as crank up the volume without disturbing others. Its full 20Hz-20kHz frequency response provides ample range for both professional and casual user applications. A 1/8-inch to 1/4-inch adapter is also included to provide added compatibility.

The HP10 Stereo Headphones are perfect for quieter keyboard, guitar and other music practice. They are also great for delivering rich and full audio to the casual listener through their MP3 or media player. In addition to the clean sound they produce, their lightweight build makes them strong performers on the go or in your home studio, and they are also great for bundling or other sales incentives.
